

## **Why choose a REMCO Electrical Manufacturing Phase Converter:**

### **Manufacturing reasons:**

#### **PRECISION ENGINEERED.**

Built on a heavy duty cast iron frame using brand name components like Square D, Weg, Siemens, Cooper-Bussman and more.

#### **EFFICIENT OPERATION:**

Low amp consumption resulting in low power bills. Power factor rated at 96%

#### **QUIET RUNNING:**

The R Series converter runs quiet too. Unlike other converters it won't drive you crazy.

#### **RUN ANY EQUIPMENT:.**

Resistive or inductive loads no problem. Your loads will develop 100% of HP ratings and run just as they would on utility 3-phase

#### **LONG LIFE:**

We build them to last.

### **Service reasons:**

#### **SUPPORT AFTER SALE**

We like to be of help even years after a sale.

Customer in Michigan: had a R-30 series that was put in service four years ago. Suddenly it shut down and customer called us after-hours frantic. We were able to identify the the problem but it wasn't the converter. His power company lost a phase. If he had called a contractor the service call would have been around \$85.00 only to have the contractor say call the utility! He was back in business that night.

Customer in Texas: Two year old R-40 under warranty lost a capacitor that we next day air to him for 10:30 AM arrival. No production time lost!

We know anything made by man can fail. Therefore it's what happens next that counts. We are expert system analyzers and troubleshooters. If we can't solve a problem over the phone we can always pay a visit. We travel the entire USA and are the only phase converter people who make personal visits.
